

Teamwork Contract

Team Name:	Twenty	TIPS FOR EFFECTIVE TEAMWORK • Complete your Teamwork Contract at your first team meeting. • Set agendas for meetings. • Ensure clarity on your action items, timelines, deliverables, and project milestones. • Check in with your team members. • Ask questions, especially if something is unclear to you. Seek to understand. • Ask for input from your colleagues and build on each other's ideas. • Structure team meetings so that everyone has a chance to speak and participate.
Team Number:	Team 20	
Course and Section Number:	3052U - 46506	
☐ Has your team completed the Team Skills Audit form? (See below.)		
SECTION A – EXPECTATIONS, BEHAVIOURS, GROUND RULES		
Have an open, direct conversation about the kinds of expectations and behaviours that will help your team work effectively. Use the questions below as a guide to start your team discussion. To ensure a productive discussion, think about these questions in advance. You might want to practice conversation management techniques or structure your conversation using Post-It notes / a shared document to allow team members to write down their opinions. ▪ What values are important to you as a team? - ▪ What grade are you aiming for as a team? How will you help each other achieve this? ▪ How will you communicate and how often? How responsive must team members be? What communication platform will you use? ▪ How will you meet as a team (in person, virtually)? How often will you schedule meetings? ▪ How will you manage file or data sharing? Which platform will you use? ▪ If a group member can't meet a deadline due to unforeseen circumstances, what should they do? ▪ What do you consider to be "late" for meetings or for internal draft submission deadlines? ▪ What will you do if you are unhappy with the quality of work produced by the team or by an individual team member? ▪ How will you handle conflict or confrontation? Will you deal with it in the moment, or do you need space and time to reflect? If team conflict or disagreement arises, how will you address it? (Consider your personal communication style and preferences and share with your group.) ▪ How will you provide constructive feedback to each other? (Consider what you need from your teammates when it comes to feedback and share with your team.) <i>Questions adapted from Barkley et al. (2014)</i>		

Use this discussion and the column on the right below to create your team's ground rules.

Example ground rules	OUR TEAM'S GROUND RULES
- Carefully read and review content from all team members to ensure familiarity with the full assignment submission. - Meet deadlines the team has agreed on. - Provide 48-hour notice for any changes to group meetings.	Communication and sharing information: - We will communicate through WhatsApp throughout the week. - We will use GitHub to share coding information. - We will create a branch for each milestone and use GitHub Issues to track each member's tasks. Meetings and deadlines: - We will meet every Tuesday from 2:30–4:00 p.m. to discuss the project and its progress. - Members should inform the group at least 24 hours before a meeting if they cannot attend. - Members should inform the group at least 3 days before an agreed GitHub Issue deadline if they expect they cannot meet it. Work distribution and quality: - Every member will be assigned specific tasks and is responsible for completing them. - Each member will review their own work and have their code reviewed by a peer before it is pushed/merged into the repository. Feedback: - Project feedback should be raised during meetings or through WhatsApp. - Feedback should be constructive and focused on improving the project. Miscommunications or incomplete work: - If a member repeatedly misses deadlines and fails to communicate with the team, the group will first discuss the issue with the member and attempt to resolve it. - If the problem continues and reaches 5 missed deadlines/miscommunications, the team may discuss removal from the team in accordance with course procedures. Other: - All members will review the final submission and understand the work being submitted. - Team members will support one another when clarification or assistance is needed.

SECTION B – PROJECT PLAN

When you decide on team roles, consider rotating roles for each task or stage of the project. This gives all team members a chance to develop a well-rounded skill set. Common roles might include facilitator, editor, data manager, coordinator, but you can decide on your own roles based on group strengths and the goals of the assignment.

Team Member	Principal Roles
David Onyema	Project Coordinator
Daniel Baba	Data manager
Qadeer Khan	Model Development
Emmanuel Akhigbe	Evaluation/Testing
Muhammad Mir	Documentation / Presentation

Notes on Team Roles (E.g., Will you rotate roles? Define any roles that are unclear above.)

TASK ASSIGNMENT		Final Deliverable Due: Dec. 4, 2026	
Task	Steps Involved in Task	Task Deadline	Team Meeting Date
Milestone 1 – Proposal & Contract	Make a team and propose the idea.	Sept. 16, 2026	Sept. 15, 2026
Milestone 2 – Dataset & Problem Approval	- Choose the final music dataset. - Verify the dataset source and licensing. - Understand what every important column means. - Understand and define ML problem - Decide how the data will be split into training, validation, and test sets. - Decide the primary evaluation metric.	Sept. 30, 2026	Sept. 22, 2026
RESULTS - A documented			

	dataset + precise ML problem + evaluation plan.		
Milestone 3 – Data Pipeline + Baseline	Goal: Turn the raw dataset into something we can actually train and evaluate. • Define exactly what we're trying to predict/recommend. • Determine what counts as a successful prediction. • Determine how we will create training/validation/test data. • Identify possible data leakage problems. • Create a simple baseline appropriate to the problem. • Implement the baseline. • Determine appropriate evaluation metrics. • Run initial experiments. • Document the baseline results.	Oct. 14, 2026	Oct. 6, 2026
Milestone 4 – First ML Model	• Research ML approaches appropriate for our specific problem. • Select at least two substantive approaches. • Explain why each approach is appropriate. • Implement the first model. • Implement the second model. • Train the models. • Tune them using	Oct. 28, 2026	Oct. 20, 2026

	validation data. • Record experiments and parameter choices. • Compare initial results with the baseline. Multiple working ML approaches + initial comparison		
Milestone 5 – Final Experiments	• Run controlled experiments. • Use the same evaluation methodology across models. • Tune models using the validation set. • Perform the final test evaluation. • Compare models against the baseline. • Investigate errors. • Identify situations where the models perform poorly. • Perform relevant robustness/sensitivity analysis. • Investigate limitations of the data and models. • Document successful and unsuccessful experiments. Final experimental results + error analysis + limitations	Nov. 18, 2026	Nov. 10, 2026
Milestone 6 – Final Report & Demo	- Finalize the ML pipeline. - Clean and organize the code. - Make the experiments reproducible. - Document the dataset and preprocessing.	Dec. 2, 2026	Nov. 24, 2026

	- Document the models and parameters. - Generate final figures/tables. - Write the final report. - Explain what the experiments showed. - Explain limitations and responsible use. - Build a simple demonstration if appropriate. - Prepare the presentation. - Review the entire repository as a team. Final GitHub repository + report + presentation + demo

Notes on Project Management and Task / Work Plan:

SECTION C – SIGN OFF

By writing your name and student number below, each of you indicates that you agree and commit to the plan developed and ground rules contained in this Team Contract.

If you do not agree with the terms above, do not sign the contract. Instead, bring up your concerns with your team. You can also contact a Teamwork Mentor by sending an email through the course slack. Teamwork Mentors can help you and your team develop ground rules and a plan of action you can all agree to.
